Test Plan Document – SPC Power BI Project

1. Objectives

To validate the SPC Power BI solution integrated with the Swine Connex portal, ensure accurate reporting, data integrity, security, performance, and business rule compliance.

2. Intended Audience

Business Stakeholders, Product Owners, Project Managers, Developers, QA Team, BA Team, Support and Operations Team.

3. Required Features to be Tested

- Power BI report rendering within portal
- User role-based access (Admin, UMM)
- Data upload via API/Web portal
- Filters, KPIs, charts, alerts
- Email notifications and audit validations
- Security and access control

4. Features Not to be Tested

- Power BI internal workspace configuration
- Third-party service outages
- Hardware-level failures

5. Risks and Dependencies

Risks include data inconsistency, API failures, performance bottlenecks, and dependency on Power BI service availability. Dependencies include stable environments, finalized requirements, and timely BA inputs.

6. Test Strategy (By Arpit Choubey)

Functional, Integration, Regression, Smoke, UAT support testing. Manual testing with selective automation for regression where applicable.

7. Test Cases (By Arpit Choubey)

Test cases will cover functional scenarios, positive/negative flows, boundary values, security, and report validation scenarios.

8. Tested By

Tested by: Arpit Choubey

9. Number of Resources Required

Total QA Resources Required: 4

10. Defect Triage Timing

Defect triage meetings will be conducted daily during execution phase and twice a week during stabilization.

11. Entry and Exit Criteria

Entry: Approved requirements, stable build, test environment ready.
Exit: All critical & high defects fixed/accepted, test execution completed, sign-off obtained.

12. Environment Availability and Health

QA and UAT environments must be stable with required integrations, database refresh completed, and access validated.

13. Point of Contact Details

QA Lead: Arpit Choubey
BA: Assigned Business Analyst
Project Manager: Assigned PM

14. KT Session from BA

Knowledge Transfer sessions will be conducted by BA covering business rules, KPIs, report logic, and user workflows.

15. Project Schedule

Test Planning → Test Design → Test Execution → Defect Fix & Retest → UAT Support → Sign-off
